

Environmental Urban Design Project

(Collaboration of Social, Medical, and Natural Sciences in Kindai University)

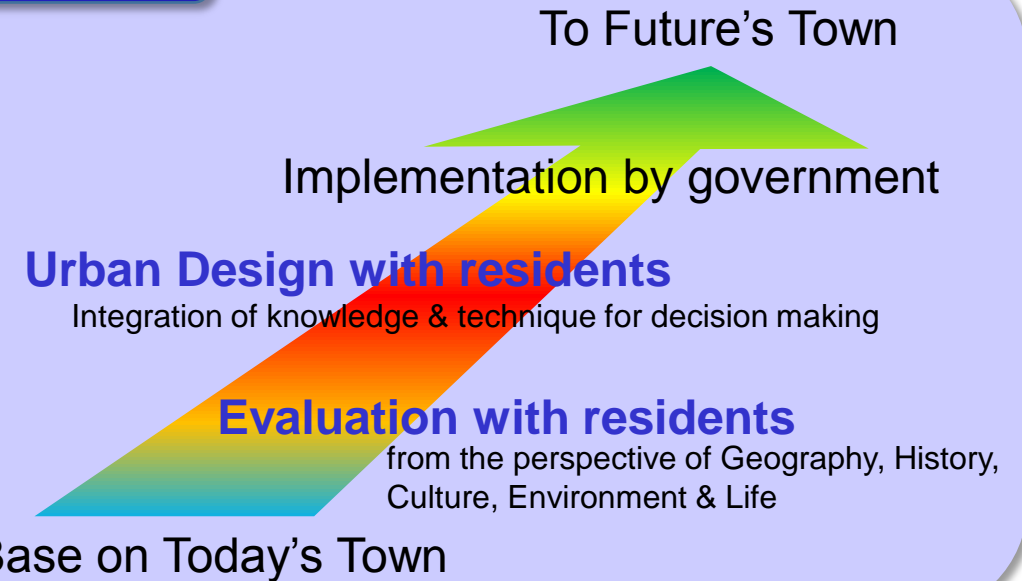

(Prof. Kohsei TAKEHARA, takehara@civileng.kindai.ac.jp , Prof. Takahiro HISA, hisa@socio.kindai.ac.jp)

Research Area

We aim to create a comfortable city through cooperation of stakeholders (i.e. citizens, administrators and academics).

Over 40 members with different research fields are collaborating in this project. The diversities of nationality, genders, ages, positions, and philosophies are very important for cooperation. **We hope you to join us on this project, which include:**

1. Discussion of various topics with city-residences.
2. Organization of cooperation meeting for connecting residents, administrators and academics.
3. Participation in citizen's activities to develop academic theory.

Recent Activities

- **General Meeting:** Six times per year. General topics and problems are shared and discussed among stakeholders.
- **Core group working:** Meetings and activities for specific topics and keywords (e.g. welfare).
